Continuation of 11. does NOT place the application in condition for allowance because: On page 7 of applicant's resposne, applicant argues that Allport only discloses a direct wireless communication link between a base station and a remote control and does not disclose a wireless local area network.

In response, as indicated in the previous action, Allport discloses a local area wireless connection between a base station and a remote control (see Allport at column 10, lines 15-65). As defined by IEEE 100, Seventh Edition, "A network is any set of devices or subsystems connected by links joining (directly or indirectly) a set of terminal nodes." (network (1) (7), page 726). Given the broadcast reasonable interpretation, the wiresless internection between the base station and remote of Allport clearly define a network.

Further, on page 7, applicant argues that a requirement of a network is that it be capable of being used with multiple user appliances. While this particular limitation to a network is not contained within or limiting within the claims, it is further noted that, as previously cited, Allport fully discloses wherein the system may involve additional display devices (column 5, lines 59-65).
